

Queen Creek TMDL Modeling Report

Table of Contents

1.0	Introduction	1
1.1	Applicable Water Quality Standards.....	4
1.2	Point Sources.....	4
1.3	Abandoned, Inactive, and Semi-active Mines	4
1.4	Landuse and Geologic Data	5
2.0	Data Summary.....	6
2.1.	Water Quality Data	6
2.1.1	Dissolved Copper Instream Data	7
2.1.2	Hardness Instream Data.....	7
2.1.3	Total Lead Instream Data	7
2.1.4	Hard Rock Data.....	7
3.0	Model Implementation	15
3.1	Hydrology Calibration.....	16
3.2	Dissolved Copper Recalibration	19
3.2.1	Existing Conditions Scenarios	21
3.2.2	Dissolved Copper Mining-Background Scenario	26
3.2.3	Oak Flat Dissolved Copper Scenario	28
3.3	Total Lead Model Implementation	31
3.3.1	Total Lead Existing Conditions and Mining-Background Scenarios	33
4.0	References	35

Appendices

APPENDIX A Queen Creek Hydrology Calibration	A-1
APPENDIX B Queen Creek Dissolved Copper Calibration.....	B-1
APPENDIX C Queen Creek Total Lead Calibration	C-1

Queen Creek TMDL Modeling Report

List of Figures

Figure 1-1: Queen Creek Watershed	3
Figure 2-1: Average Dissolved Copper Concentrations by Segment in the Queen Creek Watershed	8
Figure 2-2: Average Dissolved Hardness Concentrations by Segment in the Queen Creek Watershed	10
Figure 2-3: Average Total Lead Concentrations by Segment in the Queen Creek Watershed	11
Figure 2-4: Soil Copper Data in the Queen Creek Watershed	13
Figure 2-5: Soil Lead Data in the Queen Creek Watershed	14
Figure 3-1: Observed and Simulated Flows at Model-Segment 22 – Oak Flat	18
Figure 3-2: Observed and Simulated Flows at Model-Segment 30 – Potts Canyon	18
Figure 3-3: Observed and Simulated Dissolved Copper at Model-Segment 22 – Oak Flat	22
Figure 3-4: Observed and Simulated Dissolved Copper at Model-Segment 92 – Queen Creek	22
Figure 3-5: Observed and Simulated Total Lead at Model-Segment 22 – Oak Flat.....	32
Figure 3-6: Observed and Simulated Total Lead at Model-Segment 45 – Silver King Wash	33

List of Tables

Table 1-1: Applicable Water Quality Standards in Queen Creek	4
Table 1-2: Landuse Distribution in the Queen Creek Watershed	5
Table 2-1: Summary of Data	6
Table 2-2: Summary of Dissolved Copper Instream Observations by Sub-Basin and Subwatershed	9
Table 2-3: Summary of Total Lead Instream Observations by Sub-Basin and Segment	13
Table 3-1: Queen Creek Watershed HSPF Calibration Parameters - Final Parameter Values	17
Table 3-2: Copper HSPF PQUAL Parameters Summary by Sub-Basin and Soil-Landuse Type	20
Table 3-3: Characteristics of the Synthetic Storms	23
Table 3-4: Existing Conditions 24-Hour Average Dissolved Copper Concentrations ($\mu\text{g/L}$).....	23
Table 3-5: Existing Conditions 24-Hour Average Dissolved Copper Loads (kg)	24
Table 3-6: Existing Conditions Scenario Dissolved Copper Allocation Analysis	25
Table 3-7: Mining Areas in Queen Creek Watershed Model	26
Table 3-8: Existing Conditions and Mining-Background Scenarios - 24-Hour Average Dissolved Concentrations ($\mu\text{g/L}$)	27
Table 3-9: Existing Conditions and No-Mining Background Scenarios - 24-Hour Dissolved Copper Loads (kg)	27
Table 3-10 Subbasin Dissolved Load Percent Contribution from Mining Areas	28
Table 3-11: Existing Conditions and Oak Flat Scenarios - 24-Hour Average Dissolved Concentrations ($\mu\text{g/L}$)	29
Table 3-12: Existing Conditions and Oak Flat Scenarios 24-Hour Dissolved Copper Loads (kg)	29
Table 3-13: Oak Flat Scenario – Smelter Fallout Dissolved Copper Load Contribution	30
Table 3-14: Total Lead HSPF PQUAL Parameters Summary by Sub-Basin and Soil-Landuse Type	31
Table 3-15: Simulated 24-Hour Average Total Lead Concentrations by Scenario and Storm Event ($\mu\text{g/L}$)	34
Table 3-16: Simulated 24-Hour Total Lead Loads by Scenario and Storm Event (kg).....	34
